

# Vision for ICLT at OLHC

ICLT is an integral tool that supports and enhances the teaching and learning process. Using digital ways of working and pedagogical practise, our aim to prepare all learners to be digitally literate so that they can effectively contribute to and influence a rapidly developing and changing technological world. The integration of ICLT in the learning environment will enhance and extend our learners' ability to be creative and confident, active and informed digital citizens.

As part of our ICLT Plan we will:

- Effectively integrate a range of technologies across the Learning Areas, which challenge all learners to be confident, productive and creative users of ICLT
- Provide a contemporary technological environment which effectively prepares OLHC students as future members of an ever-changing global community rich in information
- Provide infrastructure which supports and enriches school wide pedagogy
- Recognise the expertise of staff and build the capacity of staff engagement with ICLT
- Provide targeted professional development that recognises and addresses professional needs of staff
- Provide an effectively functioning system for the school community to engage and communicate successfully for the present, with consideration to budgetary need

(ICLT = Information Communication and Learning Technologies)
